CiGen

The Online Mobile Cryptobank Payment Solution

Client
Under NDA

Industry
Retail & E-Commerce,
Startup, Finance

Location
Tunisia

GOAL OF THE PROJECT

The main goal was to quickly create a POC for a mobile cryptobank payment solution that lets users pay in cryptocurrencies without transaction limits. The challenge was to work within a strict time limit of 3 weeks to make it possible for the client to pitch this project at the WebSummit

SOLUTION & RESULTS

The POC was successfully created by our team, the deadline and all requirements were met. Our client has successfully presented their project at the WebSummit 2017 in Lisbon.
We have implemented three payment methods: nickname transfer, QR code, NFC. For that purpose we used existing Blockchain SDK and developed missing functionality.

CORE TECHNOLOGIES

Xamarin Forms, Blockchain, .NET Core, NBitcoin, Google API, Azure Cloud Services
