

Central Backup Monitoring Portal for IT Administrators

Client
Under NDA

Industry
Startup, Service & Support

Location
USA

GOAL OF THE PROJECT

To build a system that provides an opportunity to visualize users' data infrastructure and understand the risks of potential infrastructure contingencies. Based on that, companies are able to connect additional service to keep their data safe in any circumstances.

SOLUTION & RESULTS

- Developed a complete solution which includes:
- Multi-Tenant Centralized Backup Portal;
 - Centralized Backup Reporting;
 - Integrated Device and Ticketing for ConnectWise and Autotask;
 - Dashboards that allow management teams the oversight needed for backups and other features that help companies define bottlenecks in their infrastructure and prevent data loss.

CORE TECHNOLOGIES

AngularJS, NoSQL, Web API, Redis
