

Complex System for Electronic Registers and Document Flow

Client
Under NDA

Industry
Data & Documents

Location
Ukraine

GOAL OF THE PROJECT

Build software that will automate document flow inside the company and will allow them to cut business operational costs

SOLUTION & RESULTS

We have developed a desktop application that completely covered all the business needs. Also we have implemented a module to compress and encrypt traffic between web service and client.

CORE TECHNOLOGIES

WPF, WCF, MS SQL Server, Entity Framework
