

Furnistore

AR-Powered Online Shopping Service

Client
Under NDA

Industry
Retail & E-Commerce

Location
USA

GOAL OF THE PROJECT

The goal of this project was to create an application which lets people take the guesswork out of their online furniture shopping.

SOLUTION & RESULTS

We built the application which uses a device's camera and the power of augmented reality to let users place fully rendered 3D furniture models anywhere in their world. Furnistore lets users view real furniture and decor products in their home before they buy them.

CORE TECHNOLOGIES

Xamarin iOS Native, Apple ARKit Framework
