AR-powered video and photo-sharing social networking service

Client
Lobo Solutions

Industry
Media & Entertainment,
Social Networking

Location
Poland

GOAL OF THE PROJECT

Our team was involved in the development process. Our main challenge was to implement Augmented reality with Google ARCore and OpenGL ES

SOLUTION & RESULTS

Developed a video and photo-sharing social networking service. The app lets users save their moments any place in the world they actually are. They also can see what other people around them are up to with a 2D map or simply in augmented reality mode - all they need to do is to move the phone around and discover the photos and videos.

CORE TECHNOLOGIES

Xamarin Android Native, Google ARCore Framework, OpenGL ES, Google Maps API
