

Starmind

Everyone's knowledge on demand

Client
Starmind International

Industry
Startup, Technology

Location
Switzerland

GOAL OF THE PROJECT

Through Starmind people consume and contribute knowledge and expertise, making it available in real-time. Our main goal was to create native mobile applications with the possibility to view, ask, answer, rate and comment even when the user is offline. The big challenge was also in pixel perfect design implementation.

CORE TECHNOLOGIES

Xamarin iOS Native, Xamarin Android Native

SOLUTION & RESULTS

As a solution, we developed two mobile applications using Xamarin.iOS and Xamarin.Android with single core logic.

This approach helped to reduce development and testing time.

Apps work in the offline mode as well.

When the internet connection is lost, the app works using a local database as usual.

The user can write answers which are uploaded when the internet connection is back.
